P/N : HY-016(A) Name : Photosensor module

Photos :

Description :

The photosensitive sensor is sensitive to ambient light, generally used to detect the brightness and light intensity of the surrounding environment, and can sense the light source in a fixed direction. It is connected with the controller and can read the ambient light intensity, and can be made into a photoelectric switch.

Specification :

Name : Photosensor

Power : +3.0V -5.5V

Signal : Analog signal

Connector : XH2.54 × 3

Pin : S-Signal , V-VCC , G-Ground

Instructions for use: Connect the power supply and read the analog quantity of the signal pin to know the light intensity.
